## Faithlife Recruiting Team

July 1, 2017

FAITHLIFE CORPORATION  
BELLINGHAM, WASHINGTON, US.

### Job Application for Software Development Intern

Dear Faithlife Recruiting Team,

## About Me

---

I graduated with a Master's degree in Computer Science from the University of Arizona in summer 2017. I have had eight years of programming experience, mostly with C, C++, Python and Java. I am proficient in Relational Database Management Systems, especially MySQL. I also had experience with NoSQL databases, such as MongoDB and HBase, as well as experience with Big Data technology such as Hadoop and Hive. I also had web development experience with Django. In the past eight years, I worked with neuroscientists and astronomers in academia, building software systems to meet their data management challenges. I also worked in industry developing software runs in embedded devices, such as smartphone.

## Why Faithlife?

---

When I was a student, the thought of "can I use what I've learned and my technical skills to serve God and glorify His name?" constantly popped up in my mind since I accepted Jesus as my personal savior in winter 2012. So when I started looking for a job, I looked around organizations that use information technology to serve God and spread God's love, then I found Faithlife. I browsed Faithlife's website and watched several videos on it. It was a great pleasure to learn about Faithlife, to see how Faithlife equip people with powerful Bible study tools and help individuals and churches grow in the Light. I was excited when I discovered there is one spot opening for Software Development Intern and did not hesitate a second to apply! I looked at this opportunity not just as a job, but more importantly, as an opportunity for me to serve God using technology. I cannot image what a joy it would be to be part of the team that builds great software helping people and churches grow and thrive in God's Word.

## Why Me?

---

Above all, I have a heart to serve God using technology. I believe I am well equipped with skills for back-end development, given my previous experiences. Though I am lack of experiences in front-end development and Mobile app development, I am eager to learn new technologies and tools if need arises.

Finally, I thank you for your time and look forward to hearing from you!

Sincerely,

**Shuo Yang**
